Key features

For all your needs

- Frequency range from 100 kHz to 3/6/12.75/20/31.8/40 GHz
- Optional second RF path with 100 kHz up to 3/6/12.75/20 GHz
- Versatile configuration: from single-path vector signal generator to multichannel MIMO receiver tester
- Ideal for MIMO, MSR or LTE-Advanced applications thanks to up to eight signal sources and up to 16 fading channels
- Modular architecture for optimal adaptation to the application at hand

Simplify your setup

- Easy generation of complex signals
- Max. eight baseband generators on two internal baseband modules with realtime coder and ARB
- Internal digital adding of baseband signals, even with frequency and level offset
- Wideband baseband and vector signal generator in one box
- Support of all important digital standards such as 5G air interface candidates, LTE (up to Release 12), 3GPP FDD/HSPA/HSPA+, GSM/EDGE/EDGE Evolution, CDMA2000®/1xEV-DO, WLAN IEEE 802.11a/b/g/n/j/p/ac/ad
- No separate PC software required for digital standards
- Generation of radar signal scenarios for module, receiver and DFS tests
- LTE and 3GPP test case wizards for easy base station conformance testing in line with 3GPP TS 25.141 or 3GPP TS 36.141
- Envelope tracking and AM/AM, AM/φM predistortion options enable full test and verification of ET modulator chipsets

Bring reality to your lab

- Optional integrated fading section for channel emulation with up to 160 MHz bandwidth
- All important fading scenarios available as presets
- Installation of up to four fading modules, providing as many as 32 "logical" faders
- Implementation of all key MIMO fading scenarios such as 2x2, 3x3, 4x4, 8x4, 4x8 and 2x4x4 using a single instrument
- Support of complex applications such as dual-carrier HSPA, LTE carrier aggregation and multi-user LTE
- Connection of R&S®SGT100A signal generator modules to provide up to eight RF paths

Make your device even better

- Excellent signal quality for high accuracy in spectral and modulation measurements
- Up to 2 GHz I/Q modulation bandwidth (in RF) with internal baseband
- Exceptional modulation frequency response of < 0.4 dB (meas.) over 2 GHz bandwidth
- High-end pulse modulation with on/off ratio > 80 dB and rise/fall time < 10 ns
- Excellent spectral purity (SSB phase noise –139 dBc (typ.) at 1 GHz, 20 kHz offset)
- 3 GHz, 6 GHz and 12.75 GHz RF paths with electronic attenuator
- Phase coherence option, e.g. for beamforming applications

Speed up your development

- Intuitive operating concept and clever help functions for quick success
- Block diagram as key operating element to visualize signal flow
- Adaptive GUI for overview of both simple and complex scenarios
- Graphical signal monitoring at practically every point in the signal flow
- Context-sensitive online help system with complete user documentation
- SCPI macro recorder and code generator for generating executable remote control code from manual operating steps (for MATLAB®, CVI, etc.)

Grows with your needs

- Customizing of instrument to accommodate virtually every application
- Advanced plug-in system for retrofitting baseband modules without instrument recalibration
- Software upgrades possible at any time, simple and quick activation via key codes

Definitions

General

Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $<$, $\leq$, $>$, $\geq$, $\pm$, or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with $<$, $>$ or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are indicated as follows: "parameter: value".

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

In line with the 3GPP/3GPP2 standard, chip rates are specified in Mcps (million chips per second), whereas bit rates and symbol rates are specified in Mbps (million bits per second), kbps (thousand bits per second) or ksps (thousand symbols per second), and sample rates are specified in Msample/s (million samples per second). Mcps, kbps, ksps and Msample/s are not SI units.

Frequency and baseband main module options

Frequency options

One of the following frequency options must be installed in RF path A:

R&S®SMW-B103	100 kHz to 3 GHz
R&S®SMW-B106	100 kHz to 6 GHz
R&S®SMW-B112	100 kHz to 12.75 GHz
R&S®SMW-B120	100 kHz to 20 GHz
R&S®SMW-B131	100 kHz to 31.8 GHz
R&S®SMW-B140, R&S®SMW-B140N	100 kHz to 40 GHz

In addition, one of the following frequency options can be installed in RF path B:

R&S®SMW-B203	100 kHz to 3 GHz
R&S®SMW-B206	100 kHz to 6 GHz
R&S®SMW-B212	100 kHz to 12.75 GHz
R&S®SMW-B220	100 kHz to 20 GHz

The R&S®SMW-B103, R&S®SMW-B203, R&S®SMW-B106, R&S®SMW-B206, R&S®SMW-B112 and R&S®SMW-B212 options include an electronic attenuator, whereas the R&S®SMW-B120, R&S®SMW-B131, R&S®SMW-B140, R&S®SMW-B140N and R&S®SMW-B220 options include a mechanical step attenuator.

For possible RF path combinations, see section "RF enhancement options and RF path combinations" below.

Signal routing and baseband main module options

One of the following options must be installed:

R&S®SMW-B13	one I/Q path to RF section
R&S®SMW-B13T	two I/Q paths to RF section
R&S®SMW-B13XT	wideband, two I/Q paths to RF section

If RF path B is equipped (or is planned to be retrofitted) with an R&S®SMW-B2xx frequency option, an R&S®SMW-B13T or R&S®SMW-B13XT option must be installed as the baseband main module.

Baseband hardware overview

To select between two different baseband sections, simply choose the appropriate baseband main module.

To select the standard baseband section, choose the R&S®SMW-B13 or R&S®SMW-B13T option as the baseband main module. The standard baseband section enables RF modulation bandwidths up to 160 MHz and allows further options for fading and MIMO to be installed. It provides the following additional hardware options:

R&S®SMW-B10	standard baseband generator
R&S®SMW-B14	fading simulator

To select the wideband baseband section, choose the R&S®SMW-B13XT option as the baseband main module.

The wideband baseband section enables RF modulation bandwidths up to 2000 MHz. It provides the following additional hardware options:

R&S®SMW-B9	wideband baseband generator
------------	-----------------------------

RF enhancement options and RF path combinations

In addition to frequency options, the following RF enhancement options (hardware) can be installed (an R&S®SMW-B13T or R&S®SMW-B13XT option must be installed as the baseband main module):

R&S®SMW-B20	FM/φM modulator
R&S®SMW-B22	enhanced phase noise performance and FM/φM modulator

The following combinations of frequency and enhancement options are possible:

List mode

Frequency and level values can be stored in a list and set in an extremely short amount of time, triggered by an internal timer or an external trigger connector. There are two run modes available:

- learned: faster (see frequency and level data), limited number of steps, cannot be combined with I/Q optimization mode "High Quality"
- live: works only for dwell times above 2 ms but has no further limitations

Run modes		learned, live
Operating modes	internal trigger, infinite	automatic

Phase coherence (R&S®SMW-B90 option)

The R&S®SMW-B90 option provides phase-coherent RF outputs for the two RF paths or two or more instruments.

LO coupling modes	This mode corresponds to internal LO operation in path A and path B.	A, B internal
	This mode corresponds to internal LO operation in path A, and LO of path B is coupled to path A.	A internal, A → B coupled
	This mode corresponds to external LO operation at the LO IN connector in path A and internal LO operation in path B.	A external, B internal
	This mode corresponds to external LO operation at the REF/LO IN connector in path A and path B.	A external, A → B coupled
REF/LO OUT states	The active LO signal of path B can be routed to the LO OUT connector (in order to couple two or more instruments).	On/off

	Amplitude modulation	Frequency modulation	Phase modulation	Pulse modulation	I/Q modulation
Amplitude modulation		●	●	○	—
Frequency modulation	●		—	●	●
Phase modulation	●	—		●	●
Pulse modulation	○	●	●		○
I/Q modulation	—	●	●	○	

● = compatible, — = incompatible,
○ = compatible with limitations (ALC mode = off)

Two-path instruments: Frequency modulation and phase modulation are not compatible with I/Q modulation in the other RF path.

For simultaneous I/Q and frequency modulation, or simultaneous I/Q and phase modulation, the instrument must be equipped with a two-path signal routing and baseband main module (R&S®SMW-B13T or R&S®SMW-B13XT option).

Analog I/Q inputs

For each installed RF path A or B, one pair of I and Q inputs is available on the front panel (single-ended input mode). With the R&S®SMW-K739 option installed, the input mode for RF path A can also be switched to differential. In this mode, all four available connectors are used for RF path A.

Analog I/Q input signals are directly applied to the analog I/Q modulation circuit and are not routed through the baseband section of the R&S®SMW200A.

Standard baseband characteristics

Internal baseband characteristics (R&S®SMW-B13 or R&S®SMW-B13T option)

The R&S®SMW-B13 option provides one I/Q path to the RF section (to RF path A) as well as one analog I/Q output (i.e. one I and one Q output connector). The R&S®SMW-B13T option provides two I/Q paths to the RF section (if two RF paths are installed) as well as two analog I/Q outputs. With two RF paths, R&S®SMW-B13T is required.

Either R&S®SMW-B13 or R&S®SMW-B13T must be installed on the instrument.

Differential analog I/Q outputs (R&S®SMW-K16 option)

This option can be installed once if the instrument is equipped with the R&S®SMW-B13 option. If the instrument is equipped with the R&S®SMW-B13T option, differential analog I/Q outputs can be used either on signal path A or B with one R&S®SMW-K16 option. For differential analog I/Q outputs to be used on signal paths A and B simultaneously, two R&S®SMW-K16 must be installed.

Digital baseband inputs/outputs

Depending on the installed software and hardware options, the R&S®SMW200A is able to receive digital baseband signals and to output digital baseband signals. The digital I/Q input/output can be used for the lossless connection of the R&S®SMW200A to the digital I/Q input/output of other Rohde & Schwarz instruments (for example the R&S®CMW500 wideband radio communication tester in fading applications).

Digital baseband outputs: At least one R&S®SMW-K18 option must be installed. This option can be installed once if the instrument is equipped with the R&S®SMW-B13 option. If the instrument is equipped with the R&S®SMW-B13T option, digital baseband outputs can be used either on signal path A or B with one R&S®SMW-K18 option. For digital baseband outputs to be used on signal paths A and B simultaneously, two R&S®SMW-K18 must be installed. Furthermore, to enable two or more digital baseband outputs in MIMO modes, two R&S®SMW-K18 must be installed.

⁷ The magnitude of the sum of output voltage and bias voltage must not exceed 4 V.

⁸ "Optimize internal I/Q impairments for RF output" switched off.

The following table gives an overview of which software and hardware options are required for which digital I/Q connectivity:

⁹ R&S®Digital I/Q Interface PAD-R is a Rohde & Schwarz internal company guideline for the transmission of digital I/Q data. It is supported by a wide range of signal generators, signal analyzers and radio communication testers.

Standard baseband generator (R&S®SMW-B10 option) – arbitrary waveform mode

One or two R&S®SMW-B10 can be installed. Their I/Q signals can be assigned a frequency offset and/or be added in the digital domain with settable level ratio.

Prerequisite: Either R&S®SMW-B13 or R&S®SMW-B13T must be installed.

Extended sequencing (R&S®SMW-K501 option)

The R&S®SMW-K501 option enables waveform sequencing and real time signal generation for ultra long playtime. Waveform variations such as offset frequency, amplitude and phase are calculated in real time and do not require precalculated waveforms. The R&S®SMW-K501 option offers two different modes:

In user mode, all sequences are based on user-defined XML-based lists with up to 5 levels of nested loops. Special list types for frequency changes over time and amplitude changes over time are available as well.

In pulse sequencer mode, the extended sequencing is controlled by the external R&S®Pulse Sequencer software, a powerful software tool for simulating complex sequencing scenarios.

At least one R&S®SMW-B10 option (standard baseband generator) must be installed. If two R&S®SMW-B10 options are installed (signal paths A and B), extended sequencing can be used either on signal path A or B with one R&S®SMW-K501 option. For extended sequencing to be used simultaneously on signal paths A and B, two R&S®SMW-K501 options must be installed.

Standard baseband generator (R&S®SMW-B10 option) – realtime operation (custom digital modulation)

One or two R&S®SMW-B10 can be installed. The I/Q signals can be assigned a frequency offset and/or be added in the digital domain with settable level ratio.

Prerequisite: Either R&S®SMW-B13 or R&S®SMW-B13T must be installed.

Slow I/Q (R&S®SMW-K551 option)

At least one R&S®SMW-B10 option (standard baseband generator) and one R&S®SMW-K18 option (digital baseband output) must be installed.

In slow I/Q mode, the generated signal's clock rate can be reduced (e.g. a 20 MHz LTE signal is generated with a clock rate of 240 kHz instead of the original 30.72 MHz). This feature can be used to run tests on hardware emulation platforms that are not yet capable of full-speed signal processing. The signal and fading characteristics are comparable to those of a system running at full speed. The actual clock rate of the generated signal is controlled by the device connected to the digital I/Q output connectors of the R&S®SMW200A.

Note: All digital I/Q outputs need to run at the same clock rate.

Note: The minimum clock rate is limited by the external controlling device only (e.g. R&S®EX-IQ-Box).

Note: The R&S®SMW200A can handle varying clock rates.

Signal outputs		analog and digital, digital only
	with 2 × R&S®SMW-K18 installed	analog and digital, digital only, digital only multiplexed
Digital only	The instrument runs at reduced speed, depending on the device connected to the digital I/Q output (slow I/Q). The streams are output via the digital I/Q outputs only; analog I/Q outputs and RF outputs are not available. Note: System configurations with more than 4 streams are not available in this mode.	
Digital only multiplexed	The instrument runs at reduced speed, depending on the device connected to the digital I/Q output (slow I/Q). The streams are output via BBMM1 and BBMM2 in multiplexed mode, i.e. up to 4 streams are output via a single digital output. Analog I/Q outputs and RF outputs are not available. Note: All system configurations available on the instrument are available in this mode.	
Analog and digital	The instrument runs in regular operating mode, both analog and digital outputs are available, slow I/Q is not possible.	
Number of digital outputs		according to selected system configuration (see section "Digital baseband inputs/outputs")
Number of streams per digital output	digital only	1
	digital only multiplexed	1 to 4
Bandwidth	general	according to selected system configuration (see section "Multichannel, MIMO, fading and noise", specifications for R&S®SMW-K74, -K75, -K76 options)
	4 streams mapped to one digital output	40 MHz

Note: In digital only/digital only multiplexed mode, marker signals are only available via the digital I/Q interface, but not via USER or T/M/C connectors.

Note: In digital only/digital only multiplexed mode, no digital baseband inputs are available.

Wideband baseband characteristics

Internal baseband characteristics (R&S®SMW-B13XT option)

The R&S®SMW-B13XT provides I/Q paths that can be routed to the installed RF paths or to the analog I/Q outputs. Up to two signals can be output at the same time, for example:

- Signal A is routed to RF path A, signal B to RF path B
- Signal A is routed to RF path A, signal B to analog I/Q out 1

Baseband enhancements

Additive white Gaussian noise (AWGN) (R&S®SMW-K62 option)

AWGN can be generated either on path A or B with one R&S®SMW-K62 option. For AWGN to be generated on paths A and B simultaneously, two R&S®SMW-K62 must be installed, and the R&S®SMW200A must be equipped with the R&S®SMW-B13T or R&S®SMW-B13XT option.

Addition of an AWGN signal of settable bandwidth and settable C/N ratio or E_b/N_0 to a wanted signal. If the noise generator is used, a frequency offset cannot be added to the wanted signal.

Envelope tracking (R&S®SMW-K540 option)

This option requires the standard baseband section, i.e. either R&S®SMW-B13 or R&S®SMW-B13T must be installed. With this option, the analog I/Q outputs can be used to generate an analog signal corresponding to the envelope of the I/Q signal to test envelope tracking modulators.

This option can be installed once if the instrument is equipped with the R&S®SMW-B13 option. If the instrument is equipped with the R&S®SMW-B13T option, envelope tracking can be used either on signal path A or B with one R&S®SMW-K540 option. For envelope tracking to be used on signal paths A and B simultaneously, two R&S®SMW-K540 must be installed.

For each R&S®SMW-K540 option to be installed, an R&S®SMW-K16 option must be installed, and the instrument must be equipped with at least one baseband generator (R&S®SMW-B10 option)

AM/AM, AM/φM predistortion (R&S®SMW-K541 option)

This option requires the standard baseband section, i.e. either R&S®SMW-B13 or R&S®SMW-B13T must be installed.

At least one standard baseband generator (R&S®SMW-B10 option) must be installed. If the instrument is equipped with two R&S®SMW-B10 options, predistortion can be used either on signal path A or B with one R&S®SMW-K541 option. For AM/AM, AM/φM predistortion to be used on signal paths A and B simultaneously, two R&S®SMW-K541 must be installed.

Digital modulation systems

At least one standard baseband generator (R&S®SMW-B10 option) or wideband baseband generator (R&S®SMW-B9 option) must be installed. If two baseband generators are installed and two signals of the same standard (e.g. LTE) are to be output simultaneously, two corresponding software options must also be installed (in this case R&S®SMW-K55). If only one R&S®SMW-K55 is installed and LTE is selected in one baseband generator, the other baseband generator is disabled for LTE. However, a software option is not tied to a specific baseband generator.

The specified data applies together with the parameters of the respective standard. The entire frequency range, the filter parameters and the symbol rates can be set by the user.

Internal digital standards with standard baseband

Multichannel, MIMO and fading

The options described here require the standard baseband section, i.e. either R&S®SMW-B13 or R&S®SMW-B13T must be installed.

Fading simulator (R&S®SMW-B14 option)

At least one R&S®SMW-B10 standard baseband generator must be installed.

All frequency and time settings are coupled to the internal reference frequency.

Number of installable fading simulator modules		1, 2 or 4
Number of available fading channels ("logical" faders)	one R&S®SMW-B14 installed	1
	two or four R&S®SMW-B14 installed	2

Dynamic fading (R&S®SMW-K71 option)

At least one R&S®SMW-B14 fading simulator must be installed. If two or more R&S®SMW-B14 are installed (signal paths A and B), dynamic fading functions can be used either on signal path A or B with one R&S®SMW-K71 option. For dynamic fading functions to be used on signal paths A and B simultaneously, two R&S®SMW-K71 must be installed.

¹⁴ The maximum delay range of 40 µs cannot be exceeded.

Enhanced fading models (R&S®SMW-K72 option)

At least one R&S®SMW-B14 fading simulator must be installed. If two or more R&S®SMW-B14 are installed (signal paths A and B), extended statistic functions can be used either on signal path A or B with one R&S®SMW-K72 option. For extended statistic functions to be used on signal paths A and B simultaneously, two R&S®SMW-K72 must be installed.

OTA-MIMO fading enhancements (R&S®SMW-K73 option)

Two or four R&S®SMW-B14 must be installed (signal paths A and B); one R&S®SMW –K74 option and two R&S®SMW-K72 options are additionally required.

MIMO-OTA settings		
Antenna polarization mode		single antenna pattern with slant angle; separate antenna patterns for each polarization component
Calculation mode		considering antenna spacing or antenna relative phase
Inverse channel matrix	only for 2x2 MIMO	for radiated tests to counteract the channel matrix of the anechoic chamber

Customized dynamic fading (R&S®SMW-K820 option)

At least one R&S®SMW-B14 fading simulator and one R&S®SMW-K71 option must be installed. If two or more R&S®SMW-B14 are installed (signal paths A and B), customized dynamic fading functions can be used either on signal path A or B with one R&S®SMW-K820 option. For dynamic fading functions to be used on signal paths A and B simultaneously (e.g. MIMO), two R&S®SMW-K820 and two R&S®SMW-K71 options must be installed. (For each R&S®SMW-K820, a R&S®SMW-K71 must also be installed on the instrument.)

The customized dynamic fading configuration is available for all SISO and MIMO systems with 160 MHz bandwidth (see supported scenarios at options R&S®SMW-K74 and R&S®SMW-76).

The R&S®SMW-K820 option allows the variation of the fading parameters path loss, Doppler shift and delay over time. These descriptions are loaded into the R&S®SMW200A via customer specific files.

Number of fading paths		12
Profiles		Pure Doppler (only path 1 to 4), Rayleigh
File format		Rohde & Schwarz proprietary file format *.fad_udyn
Correlation	MIMO only	see section "MIMO fading/routing (R&S®SMW-K74 option)"

MIMO fading/routing (R&S®SMW-K74 option)

The R&S®SMW-K74 option allows up to 16 fading channels to be simulated as is required for 4x4 MIMO receiver tests. At least two R&S®SMW-B14 options must be installed (signal paths A and B), and two baseband sources (R&S®SMW-B10) and the R&S®SMW-B13T option must be present.

Supported scenarios with two R&S®SMW-B14 options

Higher-order MIMO (R&S®SMW-K75 option)

Four R&S®SMW-B14 options and the R&S®SMW-K74 option must be installed.

The R&S®SMW-K75 option enhances the R&S®SMW-K74 option to support higher-order MIMO modes. A common application is LTE carrier aggregation with each carrier using a 4x2 or 2x4 MIMO system (2x4x4, 2x4x2 or 2x2x4) within one box.

For scenarios with more than four baseband signals, only the “coupled sources” baseband configuration is available, i.e. all generated baseband signals belong to the same digital standard. “Coupled sources” is supported by the LTE (R&S®SMW-K55 option and enhancement options) and WLAN (R&S®SMW-K54/-K86 options) digital standards and by the arbitrary waveform mode of the standard baseband generator (R&S®SMW-B10 option). Please note that not all scenarios are supported by all digital standards.

Supported scenarios with R&S®SMW-K75

Cells with grey background: up to 80 MHz bandwidth supported for this scenario

Cells with white background: up to 40 MHz bandwidth supported for this scenario

Entities (users, cells, carriers)	TX antennas	RX antennas	1	2	3	4	8
1	4						•
	8					•	
2	1		–	–	•	•	
	2		–	–	•	•	
	3		•	•	•	•	
	4		•	•	•	•	

Note: For R&S®SMW-K75 scenarios, the following functions are not available: analog modulation, modulation sources for analog modulation, envelope tracking, AM/AM, AM/φM predistortion.

Multiple entities (R&S®SMW-K76 option)

Two R&S®SMW-B10 options and the R&S®SMW-B13T option must be installed.

The R&S®SMW-K76 option allows the generation of scenarios with up to 8 baseband signals. Common applications are multistandard radio with 8 SISO systems (8x1x1) or LTE carrier aggregation with each carrier using a 2x2 MIMO system (4x2x2) within one box.

For scenarios with more than 4 baseband signals, only the “coupled sources” baseband configuration is available, i.e. all generated baseband signals belong to the same digital standard. “Coupled sources” is supported by the LTE (R&S®SMW-K55 option and enhancement options) and WLAN (R&S®SMW-K54/-K86 options) digital standards and by the arbitrary waveform mode of the standard baseband generator (R&S®SMW-B10 option). Please note that not all scenarios are supported by all digital standards.

Note: If the R&S®SMW200A is equipped with one fading simulator module (R&S®SMW-B14 option), the functionality of the R&S®SMW-K76 is limited to the generation of 2 baseband signals only. Therefore, we strongly recommend that you install the R&S®SMW-K76 option only on instruments with either 0 or 2 or 4 R&S®SMW-B14 options.

Supported scenarios with R&S®SMW-K76

Cells with gray background: up to 160 MHz bandwidth supported for this scenario (depending on installed R&S®SMW-K522 bandwidth extension options)

Cells with white background: up to 80 MHz bandwidth supported for this scenario

Additional supported scenarios with R&S®SMW-K76 in combination with an R&S®SMW-K74 option and four R&S®SMW-B14 options

Cells with gray background: up to 160 MHz bandwidth supported for this scenario (depending on installed R&S®SMW-K522 bandwidth extension options)

Cells with white background: up to 80 MHz bandwidth supported for this scenario

Note: For scenarios with more than 2 output signals (number of entities × number of RX antennas > 2), the following functions are not available: analog modulation, modulation sources for analog modulation, envelope tracking, AM/AM, AM/φM predistortion.

Fading capabilities in R&S®SMW-K76 scenarios

Individual fading can be applied to each entity depending on the available fading options:

4 × R&S®SMW-B14	individual fading can be applied to all entities for system configurations 3x1x1 to 8x1x1 (SISO only)
4 × R&S®SMW-B14 + R&S®SMW-K74	individual fading can be applied to all entities (MIMO and SISO)
4 × R&S®SMW-B14 + R&S®SMW-K74 + R&S®SMW-K75	individual fading can be applied to all entities (MIMO and SISO)
Other configurations	no fading can be applied to R&S®SMW-K76 scenarios

Stream extender (R&S®SMW-K550 option)

Two R&S®SMW-B10 options (standard baseband generator) and the R&S®SMW-K76 option (multiple entities) must be installed.

The stream extender option enables the R&S®SMW200A to duplicate generated baseband signals (streams) for specific system configurations. As a result, four baseband streams with realtime data sources can be generated in parallel as required for test cases such as the GSM AM suppression test specified in 3GPP TS 51.021.

The duplicated baseband streams have an identical content, but appear to the receiver under test as different signals if shifted in frequency.

Note: None of the digital I/Q inputs and outputs are available in this mode.

System configuration	system configurations where the duplication of streams is available	3x1x1, 4x1x1
Duplicate streams	streams after baseband / fading block are duplicated and can be treated as individual streams, which allows adding AWGN (if R&S®SMW-K62 is available), shifting in frequency and mapping to outputs	on, off
Supported bandwidth		up to 80 MHz

Radar echo generation (R&S®SMW-K78 option)

At least one R&S®SMW-B14 option must be installed (signal path A), and one standard baseband generator (R&S®SMW-B10) and the R&S®SMW-B13 or R&S®SMW-B13T option must be present.

If two or four R&S®SMW-B14 are installed, one or two R&S®SMW-K78 options can be installed.

The R&S®SMW-K78 option allows the echo generation of independent virtual static or moving radar objects at the same time. The echoes are generated regarding the object's individual velocity, range (variation) and RCS.

Note: R&S®SMW-K78 radar echo generation and R&S®SMW-B14 fading simulation modes cannot be used at the same time.

Extended Warranty, two years	R&S®WE2	
Extended Warranty with Calibration Coverage, one year	R&S®CW1	
Extended Warranty with Calibration Coverage, two years	R&S®CW2	

Extended warranty with a term of one and two years (WE1 and WE2)

Repairs carried out during the contract term are free of charge ¹⁸. Necessary calibration and adjustments carried out during repairs are also covered.

Extended warranty with calibration coverage (CW1 and CW2)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs ¹⁸ and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.
